Law is neither panacea nor justice. An element of calculation, it answers the "how" question, whereas justice answers the "why" question. Law is anything but simple. It is a piecemeal doctrinal construction, each part more readily explained by the circumstances of its addition than by its relation to a coherent whole.An up to date analysis of the court-visited 36 cases, this monograph depicts the challenges, and outcomes of surgical negligence claims in the States, by covering a range of malpractice determinants: plaintiff's reasonableness, surgeon's state of mind, res ipsa loquitur, inter alia, strict liability, qualifications of the witness-expert, plain-error doctrine, but-for rule and proximate causation, patent law and infringement, defamation, concert of actions, conspiracy, fraud, taxation of the awards, and the dicta.

The book explains the subject of modern DNA profiling in straightforward language, and is aimed at readers with little background in science or biotechnology. A valuable resource for people needing to be informed about the methods, uses, and shortcomings of DNA profiling, it introduces basic concepts of genetics and biotechnology in the context of one of the most important developments in modern criminal investigation. This book raises controversial questions about the uses and potential misuses of DNA forensics; and illustrates issues by presenting recent criminal cases involving DNA profiling. A useful reference for law offices, legal clinics, law enforcement, defense lawyers, prosecutors, judges and the media, as it provides basic explanations of the science of, and issues surrounding, DNA forensics.

Dissociative identity disorder (DID) is a rare disease for what general practitioners have lno code.\;It however has a heavy weight in forensic research. Experts are divided on whether DID warrants an acquittal for "not-guilty-by-reason-of-insanity" (NGRI) defense. Over the past century, DID has been raised to defend a variety of offenses, from a parking ticket to the first degree murder, or to manipulate with the civil suits for monetary relief. Applying traditional rules of criminal culpability or civil liability to these cases poses a significant challenge. The concepts of personhood and identity create a havoc in determining the insanity. Diagnostic exclusions are scarce, with exceptions of the explicit memory transfer to be the key to deny the dissociated identity, whereas the absence of implicit memory transfer helps to think of personality dissociation. Retrograde amnesia comes to be a central symptom and with its variations it helps to differentiate the alters of identity from the alters of personality. There is currently no consensus within the USA legal system as to the extent to which individuals with DID can or should be held responsible for their actions. Courts that are receptive to the DID diagnostic construct have used one of three approaches to assess criminal responsibility in such cases: "alter-in-control approach," "each-alter approach," and "host-approach." Amidst the above complexity, the legal system must also deal with potentially conflicting mental health testimony, especially given enduring controversies about the DID diagnosis. DID challenges the Model Penal Code hierarchy of mens rea (purpose, knowledge, recklessness, negligence), the concept of evidence, material facts, and estoppel of duress.From the Frye test, witness categories (educating, reporting, interpreting), types of evidence (bolstering, attacking, rehabilitating), malingering and credibility of testimony, to the outcomes of adjudications, this book presents a value-adding comprehensive guide on the court-visited criminal and civil cases when one of the parties claim for suffering a DID.Equipped with 153 references, it also provides with an exhaustive analysis of 21 adjudications, inclusive for their legal rules and limits, precedents, first impressions, overrides, dicta, certiorari, dispositions, verdicts, remedies, holdings and reasoning, pursuant to the Constitutional or statute enactments in the United States and District of Columbia.Presented cases are located via LexisNexis,\; BlueBook, and Bloomberg Law. All published cases are free for public access under the U.S. Health Insurance Portability & Accountability Act (HIPAA), 14th Amendment Due Process Clause, and the Digital Millennium Copyright Act (DMCA).

In this extensively updated new edition, short essays draw on real-life scenarios to illustrate key principles and end in an easily recalled maxim.

Applied Criminal Psychology provides the reader with a comprehensive and practical guide to psychological research and techniques. It is introductory and wide-ranging and covers important forensic aspects of psychology, psychiatry, and behavioral sciences. Many key forensic issues are covered, including personality disorders, risk assessment, the forensic psychologist as an expert witness, detecting deception, eyewitness memory, cognitive interviewing, forensic hypnosis, false confessions, criminal profiling, and crisis negotiation. With this new edition and starting with the first two chapters, significant focus has been placed upon Psychopathy and the closely associated DSM category of Anti-Social Personality Disorder. Another new chapter has also been included dedicated to the principles of law associated with an accused person's mental status. The book is international and interdisciplinary in its scope and focus. Many of the contributors to this book are well known scholars and/or practitioners. It will be of great interest to psychologists, psychiatrists, criminologists, legal professionals, law enforcement personnel and students who are planning careers in forensic psychology, criminology, and policing.

This book focuses on the responsibilities of witnesses going into courts to speak on their forensic technical expertise and analyses. It discusses subjects such as forensic fraud, forensic negligence, and incompetence as well as the failures of individual experts and some less than scientifically validated forensics compared to proper conduct, attitude and presentation of actual scientific data versus personal opinion.
