10+ Age Of Discovery Navigating The Risks And Rewards Of ... The back-staff was invented by John Davis in 1590 and it allowed the navigator to stand back from the sun and work with the shadows. It was a great invention for one of the problems with the cross-staff was that you have to look at the sun and this led to blindness and damage to the navigator's eyes but, the back-staff worked with the shadows of the sun which helped obtain altitude.

What navigational tools made exploration possible? - Age ... The talk, titled "Age of Discovery: Navigating the Risks and Rewards of Our New Renaissance" provided an insight into how the present day is a contest between the bright and dark sides of discovery, with physical technological developments vastly outpacing those of social technologies; a potential threat to the further development of mankind.

Age of Discovery: Navigating the Storms of Our | Oxford ...

In "Age of Discovery", Ian Goldin & Chris Kutarna have given us an engrossing and illuminating account of the connections between the past eras of discovery, the world in which we find ourselves today, and the future towards which, we are hurtling at break-neck speed. A thought-provoking book which will leave us both uneasy, but also hopeful.

Age of Discovery: Navigating the Risks and Rewards of Our ...

Navigation in the Indo-Pacific began with the maritime migrations of the Austronesians from Taiwan who spread southwards into Island Southeast Asia and Island Melanesia during a period between 3000 to 1000 BC. Their first long-distance voyaging was the colonization of Micronesia from the Philippines at around 1500 BC.

History of navigation - Wikipedia

The great names of Da Vinci, Galileo, Copernicus, Raphael and Michelangelo were the mark of an age that saw a rush of discovery, the breaking down of barriers of ignorance and a newly connected world both politically and economically. Goldin and Kutarna say that the same forces are at work today.

The present is a contest between the bright and dark sides of discovery. To avoid being torn apart by its stresses, we need to recognize the fact and gain courage and wisdom from the past. discovery is racing forward. But the same global flows of trade, capital, people and ideas that make gains possible for some people deliver big losses to others—and make us all more vulnerable to one another. Business and science are working giant revolutions upon our societies, but our politics and institutions evolve at a much slower pace. That's why, in a moment when everyone ought to be celebrating giant global gains, many of us are righteously angry at being left out and stressed about where we're headed. To make sense of present shocks, we need to step back and recognize: we've been here before. The first Renaissance, the time of Columbus, Copernicus, Gutenberg and others, likewise redrew all maps of the world, democratized communication and sparked a flourishing of creative achievement. But their world also grappled with the same dark side of rapid change: social division, political extremism, insecurity, pandemics and other unintended consequences of discovery. Now is the second Renaissance. We can still flourish—if we learn from the first.

Now is humanity's best moment. And our most fragile. Global health, wealth and education are booming. Scientific discovery is flourishing. But the same forces that make big gains possible for some of us deliver big losses to others—and tangle us together in ways that make everyone vulnerable. We've been here before. The first Renaissance, the time of Columbus, Copernicus, Gutenberg and others, redrew all maps of the world, liberated information and shifted Western civilization from the medieval to the early modern era. Such change came at a price: social division, political extremism, economic shocks, pandemics and other unintended consequences of human endeavour. Now is our second Renaissance. In the face of terrorism, Brexit, refugee crises and the global impact of a Trump presidency, we can flourish—if we heed the urgent lessons of history. *Age of Discovery*, revised and updated for this paperback edition, shows us how.

In the face of terrorism, Brexit, refugee crises and the global impact of a Trump presidency, we can flourish-if we heed the urgent lessons of history. Age of Discovery, revised and updated for this paperback edition, shows us how.

The Age of Discovery explores one of the most dramatic features of the late medieval and early modern period: when voyagers from Western Europe led by Spain and Portugal set out across the world and established links with Africa, Asia and the Americas. This book examines the main motivations behind the voyages and discusses the developments in navigation expertise and technology that made them possible. This second edition brings the scholarship up to date and includes two new chapters on the important topics of the idea of "discovery" and on biological and environmental factors which favoured or limited European expansion.

Donald Launer has held a US Coast Guard captain's license for over 25 years. He was Field Editor for the yearly Waterway Guide and he is currently contributing editor for Good Old Boat. He is the author of Dictionary of Nautical Acronyms and Abbreviations and Lessons from My Good Old Boat.

A fascinating blend of poetry and science, Ben-Oni's poems are

precisely crafted, like a surgeon sewing a complicated stitch. The speaker of the collection falls ill, and takes comfort in exploring the idea of "Efes" which is "zero" in Modern Hebrew, using that nullification to be a means of transformation.

By the middle of the nineteenth century, as scientists explored the frontiers of polar regions and the atmosphere, the ocean remained silent and inaccessible. The history of how this changed—of how the depths became a scientific passion and a cultural obsession, an engineering challenge and a political attraction—is the story that unfolds in *Fathoming the Ocean*. In a history at once scientific and cultural, Helen Rozwadowski shows us how the Western imagination awoke to the ocean's possibilities—in maritime novels, in the popular hobby of marine biology, in the youthful sport of yachting, and in the laying of a trans-Atlantic telegraph cable. The ocean emerged as important new territory, and scientific interests intersected with those of merchant-industrialists and politicians. Rozwadowski documents the popular crazes that coincided with these interests—from children's sailor suits to the home aquarium and the surge in ocean travel. She describes how, beginning in the 1860s, oceanography moved from yachts onto the decks of oceangoing vessels, and landlubber naturalists found themselves navigating the routines of a working ship's physical and social structures. *Fathoming the Ocean* offers a rare and engaging look into our fascination with the deep sea and into the origins of oceanography—origins still visible in a science that focuses the efforts of physicists, chemists, geologists, biologists, and engineers on the common enterprise of understanding a vast, three-dimensional, alien space.

'Amazing. It would be my desert island choice' Martin Rees

Coronavirus to exploring the vast spread of the Australian bushfires, join authors Ian Goldin and Robert Muggah as they trace the ways in which our world has changed and the ways in which it will continue to change over the next hundred years. Map-making is an ancient impulse. From the moment homo sapiens learnt to communicate we have used them to make sense of our surroundings. But as Albert Einstein once said, 'you can't use old maps to explore a new world.' And now, when the world is changing faster than ever before, our old maps are no longer fit for purpose. Welcome to Terra Incognita. Based on decades of research, and combining mesmerising, state-of-the-art satellite maps with enlightening and passionately argued analysis, Ian and Robert chart humanity's impact on the planet, and the ways in which we can make a real impact to save it, and to thrive as a species. Learn about: fires in the arctic; the impact of sea level rise on cities around the world; the truth about immigration - and why fears in the West are a myth; the counter-intuitive future of population rise; the miracles of health and education that are waiting around the corner, and the reality about inequality, and how we end it. The book traces the paths of peoples, cities, wars, climates and technologies, all on a global scale. Full of facts that will confound you, inform you, and ultimately empower you, Terra Incognita guides readers to a new place of understanding, rather than to a physical location.
