How It Works: Death By Black Hole | Popular Science

Although black holes may seem like a special occurrence, they're actually in the middle of every known galaxy, even ours. The largest black hole we know of is 40 billion times the mass of our Sun. Black holes do eventually die due to a phenomenon known as Hawking radiation, which is basically a build-up of quantum effects near the event horizon. But this takes a very long time, and everything else in the Universe is predicted to have completely disappeared before the last black hole dies.
