Drug Transport in Antimicrobial and Anticancer ...

FIGURE 10–1 Bactericidal and bacteriostatic activity of antimicrobial drugs. Either a bactericidal or a bacteriostatic drug is added to the growing bacterial culture at the time indicated by the arrow. After a brief lag time during which the drug enters the bacteria, the bactericidal drug kills the bacteria, and a decrease in the number of viable bacteria occurs.

Chapter 12 Antimicrobial treatment Flashcards | Quizlet

The PDC is made of a unique biodegradable and biocompatible cationic polymer Hex Cys DET and streptomycin, a model antibiotic. The two components show strong antimicrobial synergy since the polymer can induce pores on the bacterial wall/membrane, thus significantly enhancing the transport of antibiotics into the bacteria and bypassing the efflux pump.
