12Volt-24Volt - MCI 9, MCI 12 and MCI 102 Buses

MCI coaches have been equipped with Delco alternators and external regulators for many years. When working properly, this charging system provides up to 270 amps of 24 volt power to the coach electrical system. It can be very confusing and time consuming to troubleshoot this system if it is not working properly, so a troubleshooting guide has been created to assist in following specific steps ...

Alternators with only one wire have an external regulator, which means that the regulator can be replaced if broken. In current alternator models, mechanics replace the entire alternator if the regulator malfunctions or wears out. References. Autoshop 101; Electrical - Wiring up the Alternator; About the Author. This article was written by the It Still Works team, copy edited and fact checked ...

How a 3 Wire Alternator Works | It Still Runs

Owners of some 24V buses (such as MCI) may note that the manufacturer has a 12V tap coming off the center posts and assume that this is a safe place to get 12V. Unfortunately this is not the case, this is usually used to power 12V headlights - and the center tap is to ensure that if one headlight goes out, the other headlight is still running. The side note here is that if you lose a headlight ...
