Het boek is een handzaam naslagwerk waarin u met behulp van het alfabetisch register alle verpleegkundige diagnoses met hun definities, bepalende kenmerken, risicofactoren en samenhangende factoren gemakkelijk kunt opzoeken. Het materiaal kan worden gebruikt binnen de eigen praktijk bij het genereren van verpleegkundige diagnoses en bij het (verder) ontwikkelen van een eenduidig Nederlands verpleegkundig begrippenkader. **NANDA Verpleegkundige diagnoses: Definities en classificatie 2009 2011** is het gevolg van de verdere ontwikkeling door NANDA International. In deze editie zijn de laatste wijzigingen en een flink aantal nieuwe diagnoses opgenomen zoals vastgesteld door de NANDA.*

The proceedings of the 10th International Nursing Informatics Congress (NI2009) offers a wide range of scientific knowledge to be disseminated among nurses, administrators, physicians or informaticians irrespective of whether they are clinicians, teachers, researchers or students. The variation of papers follow the advances in health information technology, although certain important topics such as ethics, education, management and clinical practice applications remain. The proceedings follows the ten themes of the conference programme: clinical workflow and human interface; consumer health informatics and personal health records; health information technology; terminology, standards and NMDS's; patient preferences and quality of care; patient safety; evidence based practice and decision support; consumer and professional education; strategies and methods for HIT training and national eHealth initiatives across the globe.

Oncologie is het standaardwerk voor alle oncologieverpleegkundigen, en verpleegkundigen werkzaam in de oncologie. De combinatie van algemene oncologische, diagnostische, medische, psychosociale en allesomvattende zorgaspecten maakt dit boek uitermate geschikt voor de dagelijkse praktijk van verpleegkundigen en andere hulpverleners die betrokken zijn bij mensen met kanker en hun naasten. De oncologische zorg is de laatste decennia steeds complexer geworden. Dit heeft effect op de behandelingstrajecten voor pati ë nten en voor de noodzaak van een goede algemene kennis en brede kijk op dit specialisme door de hulpverleners. Niet alleen op het gebied van behandeling, begeleiding en zorg, maar ook wat betreft preventie, screening, revalidatie en re T integratie, waarbij leeftijd, cultuur en spiritualiteit niet kunnen worden vergeten. Pati ë nten hebben recht op de beste, op evidence gebaseerde behandeling en zorg en indien deze niet voorhanden is, op de beste practice-based medische en verpleegkundige zorg. Dit vraagt om deskundige hulpverleners die kennis en vaardigheden bezitten om hun vak goed uit te oefenen en die verantwoordelijkheid nemen deze kennis en vaardigheden uit te breiden en up-to-date te houden. Dit boek beoogt een brede basis te leggen voor al deze gedreven hulpverleners, waarbij de pati ë nt en zijn naaste(n) niet alleen centraal staan, maar ook kunnen rekenen op de best mogelijke behandeling en zorg. Naast hoofdstukken waarmee (meer) kennis kan worden verworven ten aanzien van de algemene en specifiek medische en verpleegkundige diagnostiek, behandeling en zorg van veel voorkomende maligniteiten kent het boek ook hoofdstukken rondom thema's als organisatie van de oncologische zorg, palliatieve zorg en leeftijdsspecifieke zorg, culturele aspecten van de zorg en interactieve vaardigheden. Deze hoofdstukken zijn niet tumorgebonden en doen recht aan belangrijke aspecten in de oncologische zorgverlening.

In deze uitgave worden alle hematologische maligniteiten besproken inclusief de nieuwe therapeutische mogelijkheden met een update van de zorg rond stamceltransplantaties. Alle belangrijke aspecten van de niet-maligne hematologie, zoals bloedarmoede, transfusiebeleid, bloedings- en stollingsziekten komen uitgebreid aan bod. Nieuw toegevoegd is het hoofdstuk over immunologie en een fraai overzicht van - in de hemalogie toegepaste - chemotherapie en immunotherapie. Het slothoofdstuk (Algemene verpleegkundige aandachtspunten) is volledig herschreven en aangepast aan de moderne inzichten in de verpleegkundige zorg op het gebied van hematologie.

Dit boek beschrijft het verpleegkundig proces. Dit probleemoplossend model ondersteunt de verpleegkundige bij het diagnosticeren van pati ë ntproblemen, het planmatig inzetten van interventies en het zichtbaar en meetbaar maken van het effect van deze interventies. Daarnaast gaat het boek in op de methodische aanpak in documentatie van verpleegkundige zorg en de standaarden die de verpleegkundige daarbij kan gebruiken. Ter averduidelijkng bevat het boek vele voorbeelden van de toepassing van methodisch en systematisch werken in de verpleegkundige zorg.

A nursing diagnosis is defined as a clinical judgment about individual, family or community responses to actual or potential health problems or life processes which provide the basis for selection of nursing interventions to achieve outcomes for which the nurse has accountability (NANDA-I, 2009). Accurate and valid nursing diagnoses guide the selection of interventions that are likely to produce the desired treatment effects and determine nurse-sensitive outcomes. Nursing diagnoses are seen as key to the future of evidence-based, professionally-led nursing care – and to more effectively meeting the need of patients. In an era of increasing electronic patient health records, standardized nursing terminologies such as NANDA-I, NIC and NOC provide a means of collecting nursing data that are systematically analysed within and across healthcare organizations and provide essential data for cost/benefit analysis and clinical audit. **Nursing Diagnoses: Definitions and Classification** is the definitive guide to nursing diagnoses, as reviewed and approved by NANDA-I. Each nursing diagnosis undergoes a rigorous assessment process by NANDA-I's Diagnosis Development Committee, with stringent criteria used to indicate the strength of the underlying level of evidence. Each diagnosis comprises a label or name for the diagnosis, a definition, defining characteristics, risk factors and/or related factors. Many diagnoses are further qualified by terms such as risk for, effective, ineffective, impaired, imbalanced, self-care deficit, readiness for, disturbed, decreased, etc. The 2012-2014 edition is arranged by concept according to Taxonomy II domains, i.e. Health promotion, Nutrition, Elimination and exchange, Activity/Rest, Perception/Cognition, Self-perception, Role relationships, Sexuality, Coping/ Stress tolerance, Life principles, Safety/protection, Comfort, and Growth/development. The 2012-2014 edition contains revised chapters on NANDA-I taxonomy, and slotting of diagnoses into NANDA & NNN taxonomies, diagnostic reasoning & conceptual clarity, and submission of new/revised diagnoses. New chapters are provided on the use of nursing diagnoses in education, clinical practice, electronic health records, nursing & health care administration, and research . A companion website hosts related resources. Key features 2012-2014 edition arranged by diagnostic concepts Core references and level of evidence for each diagnosis New chapters on appropriate use of nursing diagnoses in clinical practice, education, administration and electronic health record 16 new diagnoses 11 revised diagnoses Aimed at students, educators, clinicians, nurse administrators and informaticians Companion website available, including a video on assessment, clinical reasoning and diagnosis

Nursing Diagnoses: Definitions and Classification is the definitive guide to nursing diagnoses, as reviewed and approved by NANDA-I. The 2015 – 2017 edition of the classic and internationally recognised text has been rigorously updated and revised, and now provides more linguistically congruent diagnoses as a result of the Diagnostic Development Committee ' s attentiveness to understanding the translation of the diagnostic label, definition, defining characteristics, related factors, and risk factors. Each of the 235 diagnoses presented are supported by definitions as well as defining characteristics and related factors, or risk factors. Each new and revised diagnosis is based on the latest global evidence, and approved by expert nurse diagnosticians, researchers, and educators. New to this edition: 26 brand new nursing diagnoses and 13 revised diagnoses Updates, changes, and revision to the vast majority of the nursing diagnosis definitions, in particular the Health Promotion and Risk Diagnoses A standardization of diagnostic indicator terms (defining characteristics, related factors, and risk factors) to further aid clarity for readers and clinicians All introductory chapters are written at an undergraduate nursing level, and provide critical information needed for nurses to understand assessment, its link to diagnosis, and the purpose and use of taxonomic structure for the nurse at the bedside A new chapter, focusing on Frequently Asked Questions, representing the most common questions received through the NANDA-I website, and at global conferences Five nursing diagnoses have been re-slotted within the NANDA-I taxonomy, following a review of the current taxonomic structure Coding of all diagnostic indicator terms is now available for those using electronic versions of the terminology Companion website featuring references from the book, video presentations, teaching tips, and links to taxonomy history and diagnosis submission/review process description www.wiley.com/go/nursingdiagnoses

A nursing diagnosis is defined as a clinical judgement about individual, family or community responses to actual or potential health problems or life processes which provide the basis for selection of nursing interventions to achieve outcomes for which the nurse is accountable. Accurate and valid nursing diagnoses guide the selection of interventions that are likely to produce the desired treatment effects and determine nurse-sensitive outcomes. Nursing diagnoses are seen as key to the future of evidence-based, professionally-led nursing care – and to more effectively meeting the need of patients and ensuring patient safety. In an era of increasing electronic patient health records standardized nursing terminologies such as NANDA, NIC and NOC provide a means of collecting nursing data that are systematically analyzed within and across healthcare organizations and provide essential data for cost/benefit analysis and clinical audit. **Nursing Diagnoses: Definitions and Classification** is the definitive guide to nursing diagnoses worldwide. Each nursing diagnoses undergoes a rigorous assessment process by NANDA-I with stringent criteria to indicate the strength of the underlying level of evidence. Each diagnosis comprises a label or name for the diagnosis and a definition. Actual diagnoses include defining characteristics and related factors. Risk diagnoses include risk factors. Many diagnoses are further qualified by terms such as effective, ineffective, impaired, imbalanced, readiness for, disturbed, decreased etc. The 2009-2011 edition is arranged by concept according to Taxonomy II domains (i.e. Health promotion, Nutrition, Elimination and Exchange, Activity/Rest, Perception/Cognition, Self-Perception, Role Relationships, Sexuality, Coping/ Stress Tolerance, Life Principles, Safety/Protection, Comfort, Growth/Development). The book contains new chapters on 'Critical judgement and assessment' and 'How to identify appropriate diagnoses' and core references for all nursing diagnoses. A companion website hosts NANDA-I position statements, new PowerPoint slides, and FAQs for students. 2009-2011 edition arranged by concepts New chapters on 'Critical judgement and assessment' and 'How to identify appropriate diagnoses' Core references for new diagnoses and level of evidence for each diagnosis Companion website available
