Algebra Equations And

We're asked to graph the following equation y equals $5x$ squared minus $20x$ plus 15 . So let me get my little scratch pad out. So it's y is equal to $5x$ squared minus $20x$ plus 15 . Now there's many ways to graph this. You can just take three values for x and figure out what the corresponding values

The graph of a quadratic function is a U-shaped curve called a parabola. One important feature of the graph is that it has an extreme point, called the vertex . If the parabola opens up, the vertex represents the lowest point on the graph, or the minimum value of the quadratic function.

In earlier chapters we've shown you how to solve quadratic equations by factoring. A quadratic equation as you

remember is an equation that can be written on the standard form

$$ax^2 + bx + c = 0, \text{ where } a \neq 0$$

where $a \neq 0$

You know by now how to solve a quadratic equation using

Download Free Quadratic

factoring. Another way of solving a quadratic equation is to solve it graphically. The roots of a quadratic equation are the x-intercepts of the graph.
