Inorganic Syntheses

Although some inorganic species can be obtained in pure form from nature, most are synthesized in chemical plants and in the laboratory. Inorganic synthetic methods can be classified roughly according to the volatility or solubility of the component reactants. Soluble inorganic compounds are prepared using methods of organic synthesis.

Wiley-VCH - Synthesis of Inorganic Materials

In this synthesis, inorganic based nanocomposites can be synthesized and consolidated easily into a final product in one step. The process is simple and the operating cost is low. The products obtained in this process are purer because of the high operating temperatures, which can volatilize the low boiling point impurities.
